Education

Methodist College of Engineering and Technology — **Expected August 2028**
B.Tech. in Computer Science and Engineering- AIML: ***CGPA - 9.50/10.0*** — *Hyderabad, India*

Indian Institute of Technology Madras(IITM) — **Expected May 2028**
Degree in Data Science and Applications: ***CGPA - 7.5/10.0*** — *Online Degree*

Nine Education Junior College — **Graduated March 2024**
Intermediate Education in MPC: ***Grade - 919/100*** — *Hyderabad, India*

St. Anthony's High School — **Graduated May 2022**
Secondary Education: ***Grade - 9.7/10.0*** — *Hyderabad, India*

Projects

Translation of words into sign language | *Python, Speech Recognition, NLP, Computer Vision*

- Built a multilingual speech and text to sign language translation system supporting English and Hindi, focused on accessibility for hearing-impaired users.
- Integrated OpenAI Whisper for robust speech-to-text conversion, enabling accurate translation across diverse accents and real-world audio conditions.
- Designed an end-to-end pipeline mapping textual input to sign language gesture sequences/animations, delivering real-time visual output under hackathon constraints.

Food Rescue Maps | *Kotlin, Jetpack Compose, Firebase, Google Maps API*

- Developed a real-time community platform using Kotlin and Jetpack Compose, integrating Google Maps SDK to visualize surplus food "Rescue Points" through interactive mapping.
- Accessed Firebase Realtime Database for instant synchronization of food alerts, ensuring live updates and "Claimed" statuses are reflected across all devices immediately.
- Implemented strict Location Verification using GPS and a UUID Ownership Protocol to ensure alerts are posted accurately and restrict marker removal to the original creator.
- Engineered trust-based security features including a Community Reporting System to flag fraudulent alerts and a Photo Verification module for real-time food quality transparency.

School Parent AI Platform | *Python, FastAPI, LangGraph, OpenAI, SQL Lite*

- Built an AI platform for CBSE schools that sends parents daily updates and answers academic queries over WhatsApp/app.
- Used LangGraph to route each parent message to the right specialist agent (daily update, academic, communication, or insight).
- Added FastAPI APIs, multi-tenant school data isolation, consent checks before messaging, and a simple product UI for demos.

AI Security Agency (GuardIQ) | *Python, FastAPI, Next.js, React Native, PostgreSQL*

- Built a full-stack platform for monitoring security guards across sites, with a supervisor dashboard and mobile field app.
- Added QR patrol checks with GPS and time windows so skipped or early patrols are flagged automatically.
- Created a live Guard Status Board showing each guard's state (on duty, on break, SOS, offline) in one view.
- Supported day-to-day ops with scheduling, attendance, incidents, and supervisor alerts.

Technical Skills

Languages: Python, C++, C, HTML/CSS, Java, SQL
Technologies: Linux, Git, Docker, PyTorch, Numpy, Pandas

Certifications

Advanced Google Analytics **July 2024**
- By Google Analytics Academy

Quantum Computing **May 2025**
- By Centre for Development of Advanced Computing (CDAC)

Machine Learning Specialization **December 2024**
- By Andrew Ng in Coursera.

Introduction to IoT **December 2025**
- By Cisco Networking Academy

Achievements and Extracurricular

Script Writing
- Contributed to IEEE events through script writing and coordination

Soft Skills
- Strong communication skills including public speaking and content writing

Competitions
- Participated in multiple Hackathons, Ideathons and other coding related competitions
